

AARON ROHRBACHER

Technical Lead, Senior Software Engineer — Full-Stack & DevOps

Portland, OR • (971) 361-0300 • • [LinkedIn Profile](#) • aaronrohrbacher.com

PROFESSIONAL PROFILE

Effective leader who builds high-performing teams and drives outcomes through accountability, transparency, and technical depth. Senior Software Engineer with language-agnostic expertise across the full stack and DevOps. Deep vertical experience in assistive technology, finance, HR, payroll, and logistics — delivering creative, resilient solutions across AWS, GCP, and Azure. Has owned several environments from 0-1, and into long-term maintenance. Mentors more junior engineers and consistently exceeds stakeholder expectations with safe, highly available, and scalable systems.

Certifications: AWS Certified Cloud Practitioner / AWS Certified Developer - Associate.

TECHNICAL SKILLS

AI & Machine Learning: PyTorch, custom LLM implementation, natural language processing, conversational AI, Amazon Lex, Polly, Transcribe, Amazon Q

Programming Languages: JavaScript/TypeScript/NodeJS, Python, Rust, Ruby, Java/Kotlin, Swift, Bash, PowerShell, PHP, SQL, COBOL and mainframe queries, etc...

Web Frameworks & Libraries: Next.js, React, Rails, Express, Vue.js, Angular, Ember.js, SST (Serverless Stack), Serverless Framework

Mobile & Desktop Development: iOS (Swift, native UIKit/SwiftUI), Android (Java/Kotlin, native), macOS (Swift, AppKit), Windows/Linux (Qt, Rust), React Native, Cordova, Cross-platform application architecture

Cloud Platforms & Services: **AWS** (Lambda, ECS/EKS, EC2, API Gateway, CloudFormation, VPC, Route53, IAM, Cognito, S3, CloudFront, RDS, DynamoDB, SES/SNS/SQS, CloudWatch, Cost Management, Systems Manager), **GCP** (Cloud Run, Cloud Functions, Compute Engine, Cloud SQL, Pub/Sub), **Azure**/ADO Equivalents

Infrastructure & DevOps: Docker, Kubernetes, ECS/EKS, infrastructure as code (CloudFormation, Terraform, CDK, SST, etc...), CI/CD (GitHub Actions, GitLab CI, Azure DevOps, Jenkins, etc...), container orchestration, microservices architecture, serverless architecture

Databases & Data Stores: PostgreSQL, MySQL/MariaDB, MongoDB, DynamoDB, Redis, ElastiCache, database optimization and scaling, data migration strategies

Testing & Quality Assurance: Cypress, Jest, Jasmine, Mocha, Selenium, Puppeteer, TestNG, Rest-assured, unit/integration/E2E testing, test automation architecture, BDD with Cucumber

Security & Compliance: Penetration testing, vulnerability assessments, Burp Suite, OWASP Top 10, SOC 2 compliance preparation, security best practices, IAM and access control, encryption and data protection

Frontend & Design: HTML5, CSS3, SASS/SCSS, Bootstrap, Tailwind CSS, responsive design, accessibility (WCAG), UI/UX optimization, Adobe Creative Suite, GIMP

PROFESSIONAL EXPERIENCE

Lead Software Development Engineer, Forbes AAC, Mansfield, OH (Remote) August 2025 – Present

Built and led a team from scratch to rescue a mission-critical assistive technology platform on the verge of collapse — stabilizing an active production system in days, not months, preventing data and service loss. Architected and delivered an enterprise-grade replacement application with my team, to the specifications of medical and industry professionals, with minimal downtime throughout.

- Led stabilization of a Ruby 2.6 / Ember 3.0 application (both past EOL), upgrading Ruby incrementally and building custom tooling to convert deprecated Ember code into maintainable JavaScript — preserving years of clinician-driven feature refinement.
- Used soft skills to negotiate directly with Heroku to prevent platform shutdown, executing an emergency infrastructure upgrade under extreme time pressure and keeping all stakeholders informed and satisfied.

- Rescued the Android application from being deleted from Google Play by bringing it to current standards, restoring store compliance and preserving critical daily communication capabilities for dependent users.
- Stabilized and updated the iOS app for the latest OS versions, eliminating crashes and ensuring uninterrupted service for users who depend on the app for daily communication.
- Architected and executed with my team a full multi-platform application rebuild on a modern Next.js foundation, leveraging SSR to bridge compiled legacy Ember code — preserving a decade of clinician-developed features while migrating to a scalable, maintainable platform. Native code for iOS, Android, and Windows (Swift, Kotlin, QT).

Technical Lead, Senior Software Engineer, SPARQ, Atlanta, GA (Remote) Aug 2022 – Feb 2025

Delivered technical leadership, architecture, and implementation across enterprise consulting engagements in AAC, global logistics, and payroll — owning delivery from design through production. Work in the AAC vertical led directly to being recruited by Forbes AAC as Lead Software Development Engineer.

- Stepped in as sole technical lead for a client whose engineer departed without documentation — reverse-engineered the existing API and delivered a comprehensive infrastructure migration plan.
- Served as lead system architect, designing and building microservices and APIs on AWS Lambda/Node.js — delivering a safer, more scalable system with significant infrastructure cost reductions.
- Impactful as a leader in phase-one production deployment of a full payroll system overhaul for a global logistics leader — delivering a modern, multi-system integration API serving 500k+ employees.
- Led offshore development teams on ADO CI/CD, GCP deployment, and dev environment standardization — establishing practices that enabled consistent, safe, and auditable delivery.
- Mentored more junior engineers and upskilled both offshore teams and stakeholder leadership on modern cloud computing practices.
- Led in-house team to create AI-based conversational experiences for internal websites.

Software Engineer, Nordic Semiconductor, Portland, OR Feb 2022 – Mar 2022

- Developed test automation tools and scripts for AWS in NodeJS using React, AWS, Jest, Cypress, Linux, and Istanbul.
- Built Nordic Semiconductor's first "thingy lab" where experiments with IoT devices on proprietary dashboard platform could come to life in more combinations without leaving the room.

Proprietor, Systems Architect and Engineering Manager, Nuel Cloud Computing, Portland, OR Aug 2020 – Feb 2024

- Founded and built a cloud hosting startup, architecting a proprietary AWS solution to provision containerized LAMP stacks (ECS/EKS) for WordPress and PHP developers — implemented in Node.js, Express, Python, and Serverless Framework.
- Built a full self-service customer dashboard in React/Node.js enabling automated signup, legacy system migration, stack customization, and plugin management.
- Delivered market-leading WordPress/PHP speeds through optimized backend caching and CloudFront CDN integration, at competitive price points.
- Provided security and vulnerability assessments, automating security best practices throughout the system.

Junior Software Development Engineer, Fiduciary Benchmarks, Lake Oswego, OR Jul 2018 – Aug 2021

- Designed and maintained automated test suite using JavaScript within Cypress end-to-end testing software.
- Analyzed, debugged, and communicated issues reported by data operations and service teams.
- Reliably communicated test results to Development Manager and agile development team.
- Implemented digital adoption platform (WalkMe) to develop and maintain step-by-step help system, ensuring client success with application.

Web Development Intern, Planet Argon, Portland, OR Jan 2018 – Feb 2018

- Worked on client projects for NIKE, Aloha Foods, and PAC global, creating test suite enhancements, sitemaps and integration, and advanced Spree eCommerce integration including custom roles.

Faculty and Instructor of Clarinet and Saxophone, Cascade School of Music, Bend, OR Jan 2007 – Aug 2017

EDUCATION

University of Oregon, Music Education. Eugene, OR 2004-2007
